- Spam Protection against various bots.

Requirements

Before getting started with installation check if you host meets the requirements:

- PHP >= 5.3.7
- MCrypt PHP Extension
- Port 43 enabled and accessible via PHP function fsockopen

Note: Normally, all these requirements are available in all shared hosts.

Installation Instructions

To install this script first you need to generate a key from our key generator tool [Goto Key Generator](#)

Once you have got the key, note it down somewhere safe and follow these steps.

- Unzip files on your computer
- Now edit `app/config/production/app.php` and replace `YOUR_API_KEY_HERE` with the key that you generated before.
- Create a MySQL database at your host.
- Edit `app/config/production/database.php` and fill in your database details like this:

```
'mysql' => array(
    'driver'      => 'mysql',
    'host'        => 'localhost',
    'database'    => 'YOUR_DATABASE_NAME_HERE',
    'username'    => 'YOUR_USERNAME_HERE',
    'password'    => 'YOUR_PASSWORD_HERE',
    'charset'     => 'utf8',
    'collation'   => 'utf8_unicode_ci',
    'prefix'     => '',
),
```

- You need to change values of only three things here `database`, `username` & `password`.
- Now `chmod app/storage` and all folders under it to 777.
- Open `http://www.yourdomain.com/install` in your browser, provide the asked information and done.

If everything goes good then you should see a success message else [contact support](#) for help.

Configuration

All basic configurations are possible from config area of your AdminCP i.e.

<http://www.yourdomain.com/admin/config>

Routes Modification

In case you want to change any routes related to this script you can do this by following these instructions:

- Copy `namester.php` from `app/config` to `app/config/production` directory.
- Now just change the values for `routes` array to anything you want like this:

```
'routes' => array(  
    'whois'      => 'website', // default is www  
    'pages'      => 'p', // default is pages  
    'admin'      => 'a', // default is admin  
)
```

Number of sites on homepage

To change the number of sites on homepage just change value of `per_page` attribute on in this file, like this:

```
'home' => array(  
    // How many sites on homepage?  
    'per_page' => 5, // default is 10  
)
```
